

FRITZ ROHRLICH, PROFESSOR EMERITUS

I finally found the time to look through the latest issue of *Physics Matters*. Congratulations! It is done very nicely and tells of a lot of work you did behind the scenes. You did a really great job!

In answer to your question whether *Physics Matters* once or twice a year: I believe that one somewhat larger edition (like the present one) is preferable. - However, if you want to expand the subject matter then two editions may be better. By expansion I mean the inclusion of material other than present research: historical matter about who did what when that was of special interest, as well as past or present relations of the Department to the rest of the university. For example, one might want to include stories about past outstanding faculty members (Peter?) or students as well as special visitors to the department (*e.g.* Dirac). Our department has been in existence long enough to have some substantial historical stories to tell.

These are just suggestions; you are the editor and you must decide what you find appropriate.
